## PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience designing, building, and deploying scalable web and mobile applications using React.js, Next.js, NestJS, Angular, Python, Django, React Native, JavaScript, TypeScript, Node.js, Express.js, PostgreSQL, MongoDB, and REST APIs. Skilled in developing responsive user interfaces, scalable backend services, microservices, authentication, API integration, Docker, Firebase, AWS, Git, and GitHub. Strong understanding of clean architecture, reusable code, and Agile software development practices.

## TECHNICAL SKILLS

|                        |                                                                                                                                      |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Programming Languages: | JavaScript, TypeScript, Java, Python, HTML5, CSS3, SQL                                                                               |
| Core CS:               | DSA, OOP, DBMS, System Design                                                                                                        |
| Libraries/Frameworks:  | React.js, Next.js, NestJS, Angular, React Native (Expo), Express.js, Spring Boot, Redux, Node.js, Socket.IO, Tailwind CSS, REST APIs |
| Tools / Platforms:     | Docker, AWS, GCP, Nginx, Firebase, Microservices, Microsoft Excel, Git, GitHub                                                       |
| Databases:             | MongoDB, PostgreSQL, SQL, Redis                                                                                                      |
| AI / GenAI:            | OpenAI API, Prompt Engineering, AI Integration, ChatGPT, Claude                                                                      |
| Soft Skills:           | Problem Solving, Analytical Thinking, Communication, Team Collaboration                                                              |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                  |

| <ul style="list-style-type: none"><li>Legal case management and operations platform for law firms handling high-volume mass-tort portfolios, serving case managers, administrators, vendors, advocates, and clients through the Connect portal.</li><li>Supports case intake, medical/exposure review, Smart Review, settlement workflows, checklists, reports, and classified document management.</li><li>Built with a NestJS backend (auditlab-be), PostgreSQL, Redis, and React.js frontend (auditlab-fe), communicating through REST APIs, with AWS S3 for secure document storage and workflows.</li><li>Synchronizes case data with Needles, the firm's existing case management system, while Connect provides a client-facing chat and document portal.</li></ul> |                                                                                    |

## Fluence Pay

*React Native/Expo, Node.js, PostgreSQL, Firebase, Microservices*

- Merchant: Built onboarding (applications, profile), transaction handling, and cashback campaigns; developed REST APIs for payments and funds.
- User Panel: Implemented QR scan-to-pay flow, transaction history, wallet, and Fluence Score cashback in the app.
- Admin Panel: Built merchant approval workflows, user/merchant management, and analytics dashboards.
- Integrated REST APIs across authentication, cashback, notifications, and points-wallet microservices for end-to-end payment and rewards flow.

## SIS Certification

*Python, Django, Django REST Framework, PostgreSQL, Pandas, REST APIs*

- Built a Certification Management web application using Python and Django with modules for lead management, proposals, training batches, and exam results tracking.
- Developed REST APIs and interactive admin dashboards for Cost Calculator, Training Matrix, and data analytics, including Excel import/export functionality using Pandas.
- Implemented reusable Django components for proposal pipelines, certification journey tracking, batch assignment workflows, and automated PDF report generation.

## EDUCATION

---

### Veer Kunwar Singh University

2021 - 2024

Bachelor of Business Administration (B.B.A.)

## CERTIFICATIONS & TRAINING

---

### Coding Ninjas

Jan 2023 - Jul 2023

Full Stack Web Development
